Buccan Panel System

# ARCHITECTURAL METALS

## Overview

The Buccan panel system offers an attractive, functional, and cost-effective solution for a perforated façade on a building. The system is fully unitized resulting in a reduced installation duration and therefore reduced costs compared to a non-unitized system. This system can be mounted to precast concrete, cast-in-place concrete, steel structures, and stud walls.

### Finish Options:

Panels are available in a single solid color, multiple colors, or full color images.

### Perforation Options:

Many different perforation options are available with varying hole sizes, shapes, patterns, and percent open area. Perforated images are also available. For standard perforation patterns please visit our website and see "Perforated Panels" under the products section.

## Available Systems

### Exposed Fasteners

Panel fasteners are exposed and allow for a seamless appearance from panel to panel. Good for full images that span multiple panels

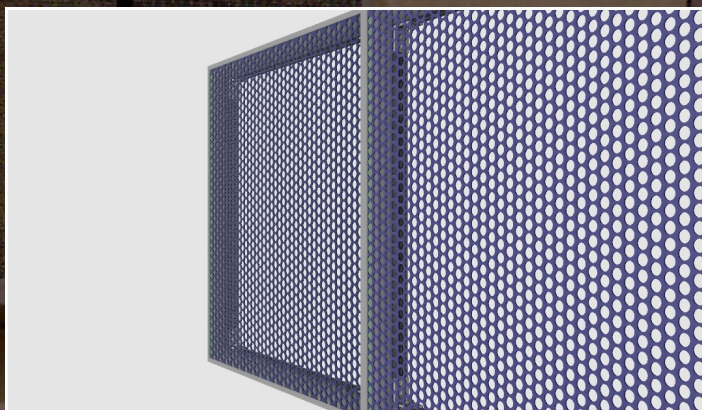

### Concealed Fasteners

Panel fasteners are concealed from view from front and back leaving a more modern look.

### Slim Line

Panel fasteners are concealed from view and a tapered framing is utilized resulting in a streamlined look.
